TECHNICAL STACK

Backend
- PHP (pure MVC)
- Laravel
- Java (Spring Boot)
- REST APIs
- JWT, JPA, OpenFeign

Databases
- MySQL (triggers, transactions)

Frontend
- HTML, CSS, JavaScript
- React, TypeScript
- Tailwind CSS

Tools & DevOps
- Git, GitHub, Postman, VS Code
- Docker, Linux, CI/CD (learning)
- Vercel

Concepts & Architecture
- MVC, SOLID principles
- API security
- Unit testing

LANGUAGES

Kirundi
Native

French
Fluent / Bilingual

English
Professional

Amos NDAYIKEZA

Software Engineering Student · Backend & Full-Stack Developer

PROFESSIONAL PROFILE

Backend developer passionate about software architecture. I write PHP (pure MVC) and Java Spring Boot, and I design secure REST APIs and databases (triggers, transactions). On the interface side, I build web applications with React and TypeScript. Rigorous and focused on code quality (unit tests, SOLID principles), I turn business needs into maintainable solutions. My goal is to become a DevOps engineer: I am learning Docker, Linux and CI/CD and applying them to my own projects.

KEY PROJECTS

Likilimba – Savings Management
2025

Micro-finance application for savings groups (tontines) — PHP / MySQL

- Designed a custom MVC framework in pure PHP (router, controllers, models).
- Built a financial engine for contributions, payouts and real-time treasury.
- Implemented roles (Super Admin, Manager, Member) with strict permission checks.
- Generated PDF/Excel reports and added internationalisation (FR, EN, Kirundi).

Technologies: PHP (pure MVC), MySQL, Chart.js (via API), PDF/Excel libraries, HTML, CSS.

Gestion Collections – National Museum
2025

Persistence and business layer of a cultural ERP — PHP / MySQL

- Modelled a robust MySQL database (10 interconnected tables, indexing).
- Deployed 50+ SQL triggers for auditing, integrity and automation (password expiry).
- Created 10 distinct MySQL user profiles (principle of least privilege).
- Automated daily backups with a Batch script and the Windows Task Scheduler.

Technologies: PHP, MySQL (triggers, events), phpMyAdmin, Batch scripts.

E-commerce Bujumbura – Multi-shop Marketplace

Multi-shop e-commerce platform for Bujumbura — Java Spring Boot / React

- Developed a multi-shop e-commerce platform with Java 21, Spring Boot, React and TypeScript, structured into business services.
- Implemented user, shop, catalogue, product search, cart and order management features.
- Set up JWT authentication, MySQL/JPA persistence and inter-service communication with REST APIs and OpenFeign.
- Built cart validation and order creation with product checks, supporting in-store pickup or home delivery.

Technologies: Java 21, Spring Boot, React, TypeScript, MySQL (JPA), JWT, OpenFeign, REST APIs.

Other projects: Spa Ngozi (React, frontend)

EDUCATION

2nd year, BSc Software Engineering
2024 – Present

Bujumbura International University (BIU)

Secondary School Diploma — Economics Section
2021 – 2024

Lycée Don Bosco de Ngozi
